BIOtech Announces Patent Approval for Its BIOchem Formula
Randolph, NJ - BIOtech Products, LLC announced that they have received US Government Patent approval for their BIOchem formula. They have revolutionized the plastics industry with this new additive that will greatly reduce the stress on our landfills and waste management. BIOchem breaks the chain on oil based polymers for PVC, PE, and Polypropylene and under anaerobic conditions these polymers are 100% landfill biodegradable. Products containing BIOchem retain their original characteristics during shelf life and quality is not jeopardized. These products will vanish completely in properly controlled anaerobic landfills within 3 to 5 years. 80% of the content is derived from sources other than petroleum. The formula is non-toxic, and contains no heavy metals, pesticides, bleaching agents, DOP or similar plasticizers, glycol ether or carcinogenic coloring agents. The unveiling of this formula came about at a critical time where companies, more than ever, are looking to make a GREEN statement.
